UI & SYSTEM STANDARD

DESIGN.md & UI Resources Blueprint

Design Token Standards, Inspiration Sources & Production Specifications

Standard: DESIGN.md v1.0
Target: Skill Barter App

1. UNDERSTANDING DESIGN.MD STANDARD

`DESIGN.md` is a plain-text design token specification standard designed for developer teams and AI code generation assistants. It combines YAML front-matter design variables (colors, typography, radii, spacing) with explicit Markdown UX constraint rules placed directly in your repository root directory.

2. PRIMARY SOURCING DIRECTORIES FOR DESIGN.MD FILES

getdesign.md & designmd.app

Open web directories containing pre-extracted `DESIGN.md` specifications from popular platforms (e.g., Linear, Airbnb, Tinder, Cal.com).

VoltAgent / awesome-design-md

A curated GitHub repository containing design token templates categorized by visual style (Minimal, Dark Cyber, Vibrant, SaaS).

Figma DESIGN.md Exporter Plugin

A Figma community plugin that parses color styles and auto-generates a ready-to-use `DESIGN.md` file from UI frames.

Google Design.md Spec CLI

An official CLI tool (`@google/design.md`) that converts `DESIGN.md` files directly into Tailwind config files or CSS variables.

3. CURATED DESIGN RESOURCE ENGINE (FEATURE-SPECIFIC)

Resource Platform	Target Component / Feature Focus	Value Provided
Mobbin	Swipe Deck, Card Stacks, Match Overlays	iOS & Android screen recordings from Tinder, Hinge & Bumble.
Refero.design	OTP Verification Forms, Locked Banners	Filter real production web interfaces by specific component type.
PageFlows	User Onboarding & Real-Time Chat	Step-by-step video recordings of real application user journeys.
SaaSpo & Lapa Ninja	Daily Streaks, Gamification & Blogs	Live SaaS design layouts for badges, streak counters & community posts.
Figma Community	App UI Kits & Wireframes	Free editable Figma UI kit templates for mobile app layouts.
Shadcn UI / Tailwind	Code Component Architecture	Accessible React/Tailwind building blocks for Modals, Tabs, Avatars.

4. PRODUCTION-READY DESIGN.MD SPECIFICATION FOR SKILL BARTER PLATFORM

```
--- version: "1.0" name: "SkillBarter Platform Design Tokens" colors: primary: "#2563EB" # Royal Blue (Primary CTAs, Match highlights) secondary: "#EC4899" # Rose (Swipe Right interest, Streak fire accent) success: "#059669" # Emerald (Learned/Agreed exchange status) warning: "#D97706" # Amber (Active exchange lock, quota limit warning) background: light: "#F8FAFC" dark: "#0F172A" surface: light: "#FFFFFF" dark: "#1E293B" typography: fontFamily: "Inter, -apple-system, sans-serif" headings: { fontWeight: "700", letterSpacing: "-0.02em" } body: { fontSize: "15px", lineHeight: "1.5" } rounded: card: "20px" # Swipe card deck border radius button: "10px" # Interactive form controls badge: "9999px" # Full pill skill tag badges --- # UI & Component Rules 1. Swipe Deck Component - Aspect Ratio: 3:4 aspect ratio with rounded corners (`20px`). - Drag Overlay: Right drag renders green interest tint; Left drag renders grey skip tint. - Daily Quota Indicator: Top-right sticky pill (`10 Free Swipes / 50 Paid Swipes`). 2. Active Skill Barter Lock State - Persistent Top Banner: `"Exchange Active — Swiping locked until skill session completes."` - Chat Input: Integrated `"Confirm Skill Taught"` button requiring dual-user agreement. 3. Gamified Streak & Blog Badge - Flame counter widget displayed on user profile avatar (`🔥 5 Day Streak`). - Writing a daily blog post adds `+5 Bonus Daily Swipes` to current quota balance.
```

5. IMPLEMENTATION & INTEGRATION GUIDE

Root Repository Placement

Save the code block above as `DESIGN.md` in the root folder of your project (`/DESIGN.md`). This makes design token rules immediately accessible across both client and server directories.

Tailwind CSS Integration

Map the design token hex colors (e.g., `#2563EB`, `#EC4899`, `#059669`) inside your `tailwind.config.js` under `theme.extend.colors` for direct utility class usage (e.g., `bg-primary`, `text-secondary`).

AI Assistant Prompting Instructions

When prompting AI coding assistants (such as Cursor, GitHub Copilot, or Claude Code), include: *"Adhere strictly to the color palette, component radii, and UI lock rules defined in /DESIGN.md when building frontend components."*
